Summary

Python Backend Developer with 2+ years of experience in product and outsource development. Builds scalable REST/GraphQL APIs using FastAPI, Django, and DRF; designs backend architecture; integrates third-party services; and automates business processes. Has experience developing AI SaaS products. Results-driven with a focus on product metrics and long-term maintainability.

Skills

Languages: Python 3.9+ (typing, dataclasses, asyncio, collections), SQL, Go

Frameworks: FastAPI, Django, DRF, GraphQL (graphql), Pandas

Databases: PostgreSQL, SQLAlchemy, Django ORM, Redis, MongoDB

Integrations: Payment gateways, BNPL/installment services, CRM, LMS, OTP/SMS/email providers

Infrastructure: Docker, docker-compose, Nginx, CI/CD (GitHub Actions/GitLab CI)

Quality: pytest, unittest, coverage, mypy/pyright, ruff/flake8, black, pre-commit, code review

Documentation & Process: OpenAPI/Swagger, Postman, Scrum, Kanban

Work Experience

Web Design Sun – Software Engineer

September 2025 — Present

Python, Go, FastAPI, Django, DRF, PostgreSQL, Redis, Celery, Pytest, Claude

1. Designed and developed core team collaboration features (user, role, and subscription management), enabling the product to enter the B2B market and driving revenue growth.
2. Integrated the Stripe payment gateway, enabling multi-currency payments and automating the subscription billing process.
3. Designed and implemented a Canva API integration to automatically check student submissions for plagiarism and AI-generated content, reducing average review time and increasing platform throughput.
4. Improved product stability with a ~25% reduction in production incidents by introducing unit tests (coverage grew from 0 to 80%) and setting up healthcheck endpoints.

Dev Symphony – Backend Developer

August 2024 — September 2025

Python, FastAPI, Django, DRF, SQLAlchemy, PostgreSQL, Redis, Celery, Pandas, Docker, CI/CD

1. Built the backend for an e-commerce store and admin panel (5,000+ SKUs, 9,000 DAU).
2. Integrated 4 local payment systems and BNPL/installment services, improving purchase conversion.
3. Reduced order processing time by 20% through CRM and OTP service integrations, API optimization, and queue tuning.
4. Reduced production bugs by 30% by introducing a CI/CD pipeline with mandatory steps: linting (ruff), static analysis (mypy), and test execution.
5. Reduced deployment time from several hours to 15 minutes by configuring CI/CD and an isolated staging environment.
6. Sped up catalog API response by 2–3x by introducing multi-level caching (Redis) and Elasticsearch for full-text search.

Guider – Python Backend Developer

March 2024 — July 2024

Python, Django, DRF, PostgreSQL, Docker

1. Refactored key API modules by introducing a service layer and eliminating N+1 queries using `select_related` / `prefetch_related`, improving data load times.
2. Increased test coverage to 78% and fixed flaky tests, reducing time spent debugging before releases.
3. Maintained and extended RESTful API (authentication, filtering), keeping contracts in sync with the frontend team via OpenAPI.

Additional

Available for interviews and technical assessments. Prefer product-focused teams where code quality, metrics, and transparent deployments matter.

Open to time-shifted schedules aligned with UTC+3.
